Gas

MatriX series

# There is so much to tell...

## Catch up in front of the fire

Together in front of the fire, relaxed and cosy. With a glass of good wine, fine music, surrounded by the warmth and the flickering light of the dancing flames. Catching up comes spontaneously, about your day, what's happening at work and the latest news from family and friends. Then there are the stories from your past, your big dreams, things you've never shared with anyone else but which now, in safe and warm surroundings, are so easy to recount. That's what a fire does to people: it keeps the outside world at bay, creating an ambience in which intimacy and contact are spontaneous and in which you can listen to each other's stories.

## Experience the warmth

In front of the fire you recount your holiday experiences with friends, read the children a story before bedtime and share your deepest feelings with your loved one. Sometimes words are not needed – a glance is enough to convey your feelings and you can both sit in silence, staring into the flames because you understand each other so well, even without words. The fire of love; where else can it be expressed better than in front of the flickering flames? That's where you experience your most beautiful moments and where you take time for each other. That's where you share your stories; full of passion, full of fire. There is so much to tell.

# Faber is an intelligent choice

**e-MatriX series**

The wonderful feel of a burning log fire. The place where you can relax, meet, recharge your batteries and share. When a gas fire or wood stove is impossible or undesirable, or for those who prefer “individual design” and specific choices, Faber has the new e-MatriX; Astonishing fire... from water. Fire for anybody, anywhere.

**MatriX series**

Enjoy having your own fire and share your most special moments even more intensely in front of the ideal fireplace. What does it look like? With the Faber MatriX fires, that is entirely up to you. The modular system of the MatriX system enables you to design your fire exactly as you want it. The fire view of MatriX gas fires is incredibly realistic, partly because of the hot glow effect created by the Symbio light module. It can be easily operated by means of a remote control or your smartphone or tablet.

## MatriX. A fireplace that suits you.

The Faber MatriX range of fireplaces leaves the choice to you in almost every way; in terms of dimensions, models, finish, interior and more. For a fireplace that adds value to your interior and living environment. Even the fuel is a choice: will it be gas, or sustainable electric and therefore ready to install nearly anywhere? Whatever your preference is, in all cases you choose for our enchanting, patented fire image; fire that stirs up conversations between people.

MatriX

A modern living room featuring a built-in MatriX fireplace. The fireplace is a large, rectangular glass unit with a black frame, set into a light-colored wall. Inside, a fire is burning over a bed of logs. To the right of the fireplace, there is a white ceramic bowl and a potted plant. The room has a minimalist aesthetic with a white wall and a light-colored floor. A sofa with patterned cushions is visible in the background.

## SketchUp

### **Draw your dream fire for your own home using SketchUp**

Would you like to sketch your future Faber fire in your living room, bedroom or indeed anywhere you want? It's not just handy but enjoyable to do on your own or together. It's easy with SketchUp. Let your fantasies and dreams run free!

### **How does it work?**

You can download the basic version of Sketchup free of charge and immediately start your project. To help you, Faber has made its entire range of ambience fires available in SketchUp (search for 'Faber fires'). All Faber fires can be found via SketchUp warehouse and you can import these into your own design. You can then incorporate a Faber fire in your living room, bedroom or other room effortlessly and easily make your own 3D design from the comfort of your home! Your Faber dealer, who can be found at [www.faberfireplaces.co.uk](http://www.faberfireplaces.co.uk), will then be able to help make your design a reality.

## Remote

### **Faber ITC - the extra smart gas fire control**

With the Faber ITC module, you can operate Matrix or Premium gas fires more comfortably and efficiently. ITC stands for 'Intelligent Technical Control'. ITC adds various smart functions to the standard Faber remote control. For example, the pleasant thermostat function accurately adjusts the flame height to a constant room temperature set by you. And with the ECO function of ITC, you choose for a height varying flame picture which allows you to save up to 70% on usage. ITC also keeps your fireplace in a good condition; the module checks the hearth for correct operation and warns you for necessary maintenance or periodic service. The ITC module can also be controlled via a specially developed online app. This makes it even possible to control your fireplace via your own smartphone or tablet. ITC is optionally available for part of the Faber program and is supplied as standard with a few fireplaces.

## Log Burner® 2.0

### Pure log fire experience

We introduced the ‘burning’ logs concept in 2001 with the first generation of Log Burners®. Now we are pleased to present the new generation of Log Burners®, in which we have incorporated a number of innovative technologies. The burning ceramic logs of the Log Burner® 2.0 give an even more realistic log fire experience. The Log Burner® 2.0 has multiple burners, which are adjustable in four positions: high, low, in front and behind. The Log Burner® 2.0 can be combined with the Symbio light module, for a beautifully glowing fire bed. Then there’s the ECOboost function: a smart thermostatic control. With the Log Burner® 2.0 you can enjoy the comfort of a flickering fire, with the benefit of contemporary technology and flexibility.

## e-MatriX Burner

### Only electricity and water are needed

The fire view of the e-MatriX is the result of the further development of the patented Opti-myst® system. All that is needed is power and water; (LED) lights and water transducers create “flames”, which cannot be distinguished from real ones. The ultra-fine water mist also contributes to the moisture balance in your home, and the burner does not use much energy. This means that the “burner” of the e-MatriX is eco-friendly, easy to operate and - due to the absence of heat - completely safe. It is recommended to replace the transducers at least once a year, depending on usage.

## Symbio module

### Enjoy light and ambience

The Symbio lighting module combines optimum ambience with low energy use. If you value a fire more for its ambience and less for its heat production the Symbio is a must for you. You know the picture: the logs have burned and only the red glowing embers remain with a small flame every now and again. But glowing embers generally radiate a lot of heat, which is not always wanted. With the Symbio lighting module you can switch the ‘embers’ on and off using the remote control. The embers are illuminated using an energy-efficient LED module. In this way you can still enjoy the light and ambience without the extra heat production of the embers.

# Sharing Life!

**Empathy**

A genuine interest in what moves or excites other people. Looking for solutions together and finding the right answers.

**Experience**

Creating a warm, sensory world that invites you to share your stories. A world that also challenges and encourages to share new experiences together.

**Content**

An urge for pure quality in everything we do and want to bring about. Working together on a story that cuts it - now and in the future.

**Human touch**

Working together on meaningful, equal relationships; creating a positive chemistry that “lives” without becoming jaded.
